04 · Training — the skills

Everything that turns four capable students into a team that can present a resourced recommendation in English, under time pressure, to practitioner judges.

The core skills trio

Three guides, read in this order, one per weekend block in Phase 2:

1. `presentation_and_storyline_guide.md` — action titles, the storyline skeleton, the 3-hour production workflow, the 3-minute boardroom pitch, seated discussion technique, delivery for non-native speakers.
2. `qa_drills.md` — answer-first protocol, bridging, the quarterback system, and **60 hard questions** in five banks with model answer patterns.
3. `business_math_drills.md` — anchor numbers, mental-math toolkit, **40 worked drills**, and the weekly 30-minute routine.

Reference and language

- `frameworks.md` — the framework toolbox, with a selector for *which* analysis a given case type actually needs. Not a menu to recite; judges punish name-dropping.
- `english_phrasebook.md` — DE–EN terminology, phrase banks for presentation, Q&A and boardroom register, numbers out loud, pronunciation traps.
- `vocab_flashcards.csv` — 87 cards. Anki: File → Import, comma-separated, first row is a header.

The exercise programme

`exercises/` holds the drills themselves — a 25-question format quiz, four solved workbooks, and the week-by-week catalog that schedules all ≈200 items onto the calendar. Start at `exercises/README.md`.

Weekly rhythm: one skill session midweek (from the trio above) + one workbook exercise + one mini-case from `../05-practice-cases/` + 30 minutes of individual drills on a third day. If a week collapses: simulation > mini-case > workbook item > individual drills.

Per-file detail: `../DOCUMENTATION.md` §2.
